

**Testimonial:**

**The Pole Dancer met our special needs at the Harris Nuclear Plant. We have cranes available, but needed a fixed height lifting device to set poles under 230KV Power Lines and maintain the required safe clearance. The Pole Dancer met all of our strict Nuclear Plant safety requirements. Classroom and in-field training was provided and was invaluable to our project needs. At a very low cost, they engineered a shorter beam to meet our clearance requirements with no delay to our delivery time. This product is a great value for the money.**
